

SHARBI

\$SHARBI

2023 WHITEPAPER

INTRODUCTION

Sharbi is a cryptocurrency token built on the Ethereum blockchain using the Arbitrum network. It is classified as a memecoin, which means that it often has a humorous or satirical focus. Sharbi aims to provide rewards to its holders in USDC, a stablecoin pegged to the value of the US dollar.

Why We Built On Arbitram

Arbitrum is a Layer 2 scaling solution for Ethereum that aims to increase the speed, efficiency, and scalability of decentralized applications built on the Ethereum network. By building on Arbitrum, developers can take advantage of its faster transaction processing times and lower gas fees compared to the Ethereum mainnet, allowing for more affordable and seamless user experiences. Additionally, Arbitrum offers enhanced security features, such as trustless execution, that can further protect user funds and data. Overall, building on Arbitrum provides a compelling alternative for developers looking to build decentralized applications with improved performance and security.
